To provide an overview of the technologies (including those fueled by more traditional means, such as gas-fired distributed generation and combined heat and power; those designed to reduce load; and those using newer resources like renewables) and policies (such as net metering, RPS, tax incentives, and rebates) that are contributing to the increased use of distributed energy resources.  
*Jesse Berst, Founder & Chief Analyst, Smart Grid News*
- 2:30 – 3:15 p.m. **Benefits & Challenges of DER**  
Panelists will discuss the benefits and challenges presented by alternative supply options on consumers, utilities, and regulators. Consumers are increasingly becoming more informed and engaged on choices about how they receive energy and how they manage their usage, but not all consumers choose to or are in positions to invest in these technologies. Utilities can benefit from new technologies but may also see increased costs as these technologies further develop. Regulators face the challenge of facilitating new consumer demands while minimizing any negative impacts to the electric delivery system and consumers.
